DETAILED ACTION

1. Applicant's election without traverse of Group I, claims 1-2, in the reply filed on March 10, 2005, is acknowledged.
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 1-2 are rejected under 35 U.S.C. 102(b) as being anticipated by Theurer (US 5,961,271).

Theurer discloses a system for unloading elongated rails, that inherently requires all the method steps of operation as recited in the instant claims. The unloading system of Theurer includes rail feeding devices 34 and two powered thread boxes 4 for guiding and transporting first, second, third and fourth rails onto a railroad bed.

Regarding the instant claimed step of propelling the railcar along the track at a sufficient speed, as recited in instant claims 1 and 2, it is noted that the unloading system of Theurer inherently requires the railcar to move along the track at a sufficient speed, i.e. a speed corresponding the operating speed of the two powered thread boxes, for proper operations of laying the rails onto the track in a substantially end to end relationship.

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Applicant should further consider the structure of Moorefield.
